

T0: FCC            Re: NABs Petition 04-160    Restricting Satellite Radio

I respectfully request that the FCC reject the above petition. Satellite Radio allows me to receive information which allows me to drive in a safer enviroment providing weather and traffic information. Traveling through the continental U.S. local stations are many times unavailable and do not have the type of programming that meets my traveling needs. This is a paid service by myself and others and as such we should not be restricted to the type of vital information that is available through this means.

Again, thank you for your consideration.
